

# What is Location Network Media? ... empowering Commercial Production Companies ...

Location Network Media is a web-based media management application that puts Production in the driver's seat when it comes to locations and scouting. Through syndication (go to "Syndication" for more information) of the industry's premiere location scouting tool, we make it easy and cost effective for you to centralize, manage, distribute and keep location images.

- **FIND IT**      Uploading has never been faster or easier. Once a job is awarded and a scout hired, provide your scout with log-in access. The scout will be able to upload their images directly into a Light Box. (JavaScript is required)
- **SHOW IT**      Location Network Media's Light Box provides you with a powerful yet simple platform for displaying your locations. Uploaded images are available for viewing and printing from the Light Box. Maps to locations are accessed by including contact information. Screening Rooms can be accessed or emailed to any one of your choosing. And because it's a web application, it can also be accessed from any computer across the globe.
- **KEEP IT**      At the completion of the job all of the locations are secured neatly in their folders and are automatically added to your database. No scattered CD's, no loss of revenue by losing your locations and information you have paid for, and no more "shut down" of locations provided by your scouts. You build your own location library keeping every location for use on future jobs, bids and reference.

The requirements are minimal. No specialized technical expertise is needed, there is no software to install, no hardware to buy nor is there need for IT support and maintenance. If you have a computer, browser and internet connection, you are an eligible candidate for this tool specifically designed for fast-paced commercial production.

Empower your Production Company with Location Network Media's management system built specifically for the uploading, organizing, presenting, and storing of location images. Finally, an investment that rocks!
